

CHX-Plus™ More deadly to biofilm bacteria than 2% CHX.

4X more effective than standard 2% CHX against biofilms!

- Kills bacteria 10 times faster than standard 2% CHX
- Kills biofilms 4 times faster than standard 2% CHX
- Reduces surface tension
- Penetrates deeper

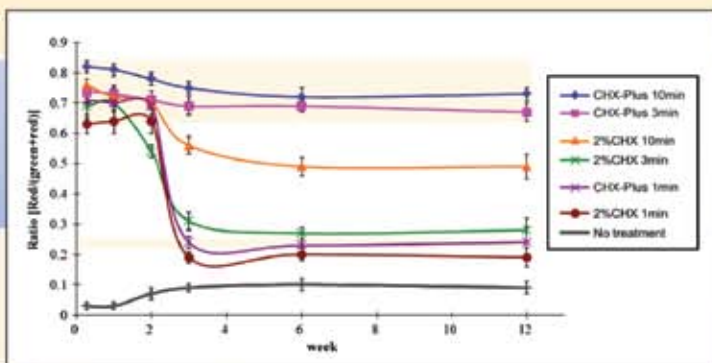

Results of university-based research show that CHX-Plus™ retains its effectiveness against biofilm bacteria significantly better than standard 2% CHX.

Data indicated that the same biofilm was more resistant to standard 2% CHX (such as Concepsis[†] by Ultradent[®] and Endo-CHX[®] by EDS[†]).

CHX-Plus™ also showed higher levels of bactericidal activity than standard 2% CHX at ALL exposure times for ALL aged biofilms.

J. Endod 2011; 37:657-661

Results show that it takes over 4 times as long for standard 2% CHX to kill as much biofilm as CHX-Plus™.

In addition, CHX-Plus™ retains effectiveness, while bacteria in mature biofilms are significantly less affected by standard 2% CHX.
